**SCOPE:**

TC 4.5 is concerned with the identification and evaluation of all physical properties of (1) glasses and other glazing materials, (2) shading and shielding materials and devices, and (3) control devices and strategies which influence the radiant, conduction, and convection transfer of both heat and light through fenestration systems. It is also concerned with the development of procedures for calculating and measuring solar heat gain, daylight admission, and heat transfer through fenestration systems.

Calculation Methods (Charlie Curcija).

Meeting was not held in lieu of attending ISO TC 163 US TAG meeting, where Charlie Curcija presented new work item (NWI) for the development of harmonized ISO standard on the calculation of thermal and solar-optical indices for fenestration and fenestration shading. In addition, WG under SC2 is being proposed that will deal with windows only. Further discussion centered around the concern that we might not succeed in convincing Europeans to abandon ISO 10077 and also concern about resources that we can devote.
